

Earthquake in Bangkok and Myanmar - March 28, 2025

Background Information

On March 28, 2025, a powerful 7.7 magnitude earthquake struck Myanmar and Thailand, leading to widespread destruction and significant loss of life, particularly in Bangkok and the central regions of Myanmar. This disaster has been one of the most devastating seismic events in Southeast Asia's recent history, highlighting the region's vulnerabilities to natural disasters and the urgent need for improved disaster preparedness and infrastructure resilience.

Body Sections

Incident Overview

The earthquake, with its epicenter near Mandalay, Myanmar, had a profound impact, extending its tremors across Southeast Asia. The quake resulted in the collapse of buildings and infrastructure, leading to a high number of fatalities and injuries. In Bangkok, Thailand, the collapse of a high-rise building under construction was particularly catastrophic, trapping numerous individuals and resulting in at least three confirmed fatalities. Myanmar declared a state of emergency due to the extensive damage and rising death toll, which surpassed 1,600 across both countries.

Impact and Casualties

The earthquake's impact was most severe in Myanmar, where the death toll has risen to over 3,000, exacerbated by ongoing civil conflict that has hindered relief efforts. In Thailand, the disaster has drawn significant attention to construction safety standards and regulatory oversight. The collapse of the high-rise building in Bangkok led to the arrest of several individuals, including a prominent construction tycoon, raising questions about accountability and safety measures in the construction industry.

Emergency Response and Aid Efforts

Efforts to provide aid and conduct search and rescue operations have been complicated by the political instability in Myanmar. The international community has called for increased aid and cooperation to assist the affected regions, although there are contrasting opinions on the need for local governance and accountability in managing the disaster response. In Thailand, emergency services were quickly deployed, and the government initiated a disaster response plan to assist the affected areas, although criticisms have been raised regarding the lack of an effective emergency messaging system.

Infrastructure and Preparedness

The disaster has highlighted the urgent need for improved disaster preparedness and infrastructure resilience in both countries. The collapse of buildings and infrastructure has underscored the vulnerabilities of urban areas in seismically active regions. Experts have stressed the importance of updating building codes, enhancing public awareness, and implementing effective emergency response plans to mitigate the potential impact of future seismic events. The region's infrastructure resilience and disaster management systems require significant improvements to handle such large-scale natural disasters effectively.

Media and Public Awareness

The earthquake has received extensive media coverage, with numerous articles and videos documenting the disaster's impact and the ongoing rescue efforts. Reports have emphasized the geological risks involved, the preparedness efforts by local authorities, and the importance of public awareness in reducing the potential impact on infrastructure and the population. The media has played a crucial role in highlighting the need for improved safety standards and emergency response measures.

Summary/Conclusion

The earthquake that struck Myanmar and Thailand on March 28, 2025, has been a stark reminder of the vulnerabilities faced by urban areas in seismically active regions. The disaster resulted in significant loss of life and extensive damage to infrastructure, particularly in Bangkok. It has highlighted the urgent need for improved disaster preparedness, infrastructure resilience, and effective emergency response systems. The international community, along with local governments, must work together to enhance disaster management capabilities and ensure the safety and well-being of the affected populations. The lessons learned from this tragic event must be used to inform future preparedness and response strategies to mitigate the impact of similar disasters in the future.

Appendix A

Overview:

On March 28, 2025, a powerful 7.7 magnitude earthquake struck Myanmar and Thailand, causing widespread destruction, particularly in Bangkok. The quake resulted in at least three confirmed fatalities in Bangkok, along with the collapse of a high-rise building under construction, which trapped numerous individuals. Myanmar declared a state of emergency due to significant damage and rising casualties, with reports indicating over 1,600 deaths across both countries. Efforts to provide aid and conduct search and rescue operations have been complicated by ongoing civil conflict in Myanmar.

Insights:

The 2025 earthquake, registering a magnitude of 7.7, has had devastating effects across Southeast Asia, particularly in Myanmar and Thailand. The death toll has risen significantly, with reports indicating over 3,000 fatalities in Myanmar alone, exacerbated by ongoing civil conflict that hampers relief efforts. In Thailand, the collapse of a high-rise building under construction has drawn attention to construction safety standards and regulatory oversight, leading to the arrest of several individuals, including a prominent construction tycoon. The disaster has highlighted the urgent need for improved disaster preparedness and infrastructure resilience in both countries, as the region grapples with the dual challenges of natural disasters and political instability. While some voices call for increased international aid and cooperation, contrasting opinions emphasize the need for local governance and accountability in managing disaster response. Overall, the earthquake serves as a stark reminder of the vulnerabilities faced by urban areas in seismically active regions and the critical importance of robust emergency management systems.

Article 1: Thailand and Myanmar earthquake: Is it safe to travel to Thailand and is Bangkok airport open? | The Independent

Link:

<https://www.independent.co.uk/travel/news-and-advice/thailand-bangkok-earthquake-safe-travel-myanmar-airport-b2>

A 7.7-magnitude earthquake struck central Myanmar on March 28, causing significant destruction and loss of life, with over 2,700 confirmed dead and many more injured or missing. The quake's tremors were felt as far as Bangkok, Thailand, where three construction site fatalities were reported and over 70 people are feared trapped under debris. Aid groups highlighted urgent needs for food, shelter, and water in Myanmar, which is already facing a civil crisis. The earthquake was followed by a 6.4 magnitude aftershock, prompting evacuations in Bangkok. Airports in Thailand remained operational, while Mandalay and Naypyitaw airports in Myanmar suffered significant damage. The UK Foreign Office issued travel advisories for both countries, warning against travel to affected areas and offering support to British nationals.

Article 1: Thailand and Myanmar earthquake: Is it safe to travel to Thailand and is Bangkok airport open? | The Independent

Link:

<https://www.independent.co.uk/travel/news-and-advice/thailand-bangkok-earthquake-safe-travel-myanmar-airport-b2>

A powerful 7.7-magnitude earthquake struck central Myanmar on Friday (28 March), with tremors reaching as far as Thailand's capital Bangkok, causing high-rise buildings to collapse and filling streets with rubble, leaving the loss of thousands of lives in its wake. The toll after the catastrophic earthquake has risen to over 2,700, with thousands more injured and many others still missing. Collapsed buildings now line the streets with debris in the city of Mandalay, with buildings destroyed and palaces damaged in Myanmar. Aid groups arriving in the worst-hit areas in Myanmar said there is an urgent need for food, shelter, and water, with the UN saying the earthquake has compounded an "already dire crisis" with the country embroiled in civil war.

In Bangkok, fatalities were confirmed at three construction sites amid the quake, including the collapse of a high-rise building under construction near Bangkok's Chatuchak Market. Thailand's toll has reached around 20, while over 70 people remain missing and are feared to still be trapped beneath the debris of the high-rise. Rescue efforts are ongoing. Elsewhere, witnesses in Bangkok said people ran out onto the streets amid last week's earthquake, many of them hotel guests in bathrobes and swimming costumes as water poured from an elevated pool at a luxury hotel. Residents in Chiang Mai also reported hearing the quake. The Thai Department of Disaster Prevention said the quake was felt in almost all parts of the country.

The earthquake struck at a depth of 10km, about 17.2km from Myanmar's second-largest city of Mandalay, according to the United States Geological Survey (USGS). The midday temblor was

followed by a strong 6.4 magnitude aftershock, and people in Bangkok evacuated from their buildings were cautioned to stay outside in case there were more.

Thailand's major airports are operational; inbound and outbound flights have largely not been disrupted. Thailand's airport group, Airports of Thailand (AOT) said on Friday, 28 March: "AOT has completed inspections of 6 airports, confirming that the structural integrity of their buildings and aviation infrastructure meets safety standards. All airports have resumed normal operations as of 2.30pm." The six airports include Suvarnabhumi Airport, Don Mueang Airport, Chiang Mai Airport, Mae Fah Luang Chiang Rai Airport, Phuket Airport and Hat Yai Airport. Over in Myanmar, the UK's Foreign Office said: "Mandalay and Naypyitaw airports are significantly damaged with no indication of when they may reopen."

After temporary closure, services on the BTS Skytrain in Bangkok and long-distance routes resumed by the evening of 28 March. Thailand's Mass Rapid Transit Authority has also said its lines have largely resumed normal operations, while road travel in Bangkok is now operating as usual.

The UK's Foreign, Commonwealth and Development Office (FCDO) has updated its travel advice for Thailand after the earthquake. The FCDO said that there has been a 7.7 magnitude earthquake in Myanmar, with strong tremors reported across Thailand and some damage reported to buildings in Bangkok. "There may be aftershocks. If you're in the area or planning to travel there, follow the advice of the local authorities or your tour operator and monitor local media," its advice states.

The FCDO has also issued new advice for travellers in Myanmar, stating that the epicentre is in the Sagaing region near Mandalay City, affecting large parts of the country. "Mandalay and Naypyitaw airports are significantly damaged with no indication of when they may reopen," the Foreign Office says. "There may be several strong aftershocks." "The military regime announced a State of Emergency in six states and regions: Naypyitaw, Sagaing Region, Mandalay Region, Magway Region, northeast Shan State and Bago Region, in addition to the nationwide State of Emergency in place since the coup of 1 February 2021. We advise against travelling to all affected areas at present." "If you're in the area, follow the advice of the local authorities and monitor local media." The FCDO is offering support to British nationals in both Myanmar and Thailand following the earthquake. British nationals in Myanmar who require consular assistance can call British Embassy Yangon. British Nationals who require consular assistance in Thailand can call British Embassy Bangkok. Anyone in the UK concerned about a British national in Myanmar or Thailand can contact the FCDO.

The conditions for cancelling your trip will be dependent on your holiday provider, so it's best to contact them if you're looking to postpone. In terms of travel insurance, some policies include natural disaster cover for an event that prevents you from reaching your holiday destination. Check your insurance policies and speak to your insurer to see where you stand. For those planning a trip to the Thai capital, the Foreign Office has not warned against non-essential travel to Bangkok; there will be no special circumstances in place to be able to cancel a trip for a full refund. There is no obligation for companies to refund bookings if you want to cancel, and you will not be able to claim travel insurance due to safety concerns unless the Foreign Office advice changes.
