

# DXC (Dept's X-Lan ChatGPT) Training

18 AUG 2026

# Course Outline

- ▶ **Brief History of AI / overview of how ChatGPT works**
- ▶ **Walk-thru/ hands on practice of DXC features**
  - ▶ Chat and Translation
  - ▶ Batch Files Query
  - ▶ Vision – image query
  - ▶ PowerPoint Generator
  - ▶ Video and Image generation
  - ▶ BYD (Bring Your Documents) – Running LLM for Multiple Documents
- ▶ **Tea-break**
- ▶ **AI Research Assistant (AIRA)** - Analyse videos, audio, text from URLs and generate insights, output summary slides and report
- ▶ **BOB – Builder of Builders**
- ▶ Exercise – Who is Max?

# What is AI? – A Bit of History

- ▶ **Alan Turing** (1912 – 1954) -“Father of AI”
- ▶ Co-invented the **Bombe** machine to break the **Enigma** machine during WWII

## Turing Test

### Can machines think?

- The computer passes the test if a human interrogator, after posing some written questions, cannot tell if whether the written responses come from a person or not (Alan Turing, 1950)

# Let's Try the Turing Test

Question

What is your favourite subject in school?

Judge

Machine or Human?

A  
My favorite subject is Science because I love doing experiments and exploration.

B  
My friends and teachers say I am totally stupid and untalented, so I like only music lessons, because music teacher tells me only that I'm tone-deaf and at least doesn't call me stupid.

# Eugene Goostman

On 7 June **2014** a Turing test competition to mark the 60th anniversary of Turing's death, was held at the Royal Society London and was won by the Russian chat bot **Eugene Goostman**.

The bot, during a series of five-minute-long text conversations, convinced **33%** of the contest's judges that it was human. (30% was the benchmark)

Interestingly, Turing predicted that the benchmark would have been broken by year **2000**.

AI progressed much through the decade...since 2014

- ... Neural Networks
- ... Attention Networks
- ... Transformers
- ... Generative Pre-trained Transformers (GPT)

**How ChatGPT works in simple terms**

# Guess the phrase

# Guess the phrase

Methodology – how do our human brain process the phrase?

- ▶ **Threshold** based on memory
- ▶ **Pre-trained** memory
- ▶ Sequential/**Bi-directional** Info
- ▶ **Contextual** info across words

# Attention Model

An **Attention model** assigns a level of importance (“attention”) to different parts of the input data by creating the **context** vector.

The **Bidirectional implementation** of the context vector considers both forward and reverse sequence of the data.

Empire State Building is in New ...

## Methodology

- ▶ Threshold based on memory
- ▶ Pre-trained memory
- ▶ Sequential/Bi-directional Info
- ▶ **Contextual info across words**
- ▶ Neural Network is similar to the human brain

# Transformers – Attention is All You Need

- ▶ Transformer architecture consists of a **multi-attention mechanism** that considers a **long distance context around a word**

Vaswani, Ashish & Shazeer, Noam & Parmar, Niki & Uszkoreit, Jakob & Jones, Llion & Gomez, Aidan & Kaiser, Lukasz & Polosukhin, Illia. (2017). **Attention Is All You Need paper.**

# How Does ChatGPT Work?

ChatGPT leverages GPT-3.5 as the underlying model, while it uses an additional layer, a model called InstructGPT, which has become a standard within the OpenAI large language models. InstructGPT optimizes conversational abilities and improves on top of the existing GPT models.

# What can ChatGPT do for you?

## ► Retrieve information from text

 Summarize the follow: The death penalty has been a controversial issue in Singapore for many years, with strong opinions on both sides of the debate. Supporters of the death penalty argue that it is an effective deterrent against crime, particularly for serious offenses such as drug trafficking and murder. They also point to Singapore's low crime rate as evidence of the deterrent effect of the death penalty.

...

 The death penalty is a contentious issue in Singapore, with supporters claiming it is an effective deterrent against serious crimes, while opponents argue it is a cruel punishment that violates human rights and may not be more effective than other forms of punishment. Recent changes have given judges more discretion in sentencing and reduced the number of executions, but public opinion remains divided, with 72% of Singaporeans supporting the death penalty. However, younger and more educated Singaporeans are more likely to oppose it.

 Extract keywords from the following: The death penalty has been a controversial issue in Singapore for many years, with strong opinions on both sides of the debate. Supporters of the death penalty argue that it is an effective deterrent

 Keywords: death penalty, controversial issue, Singapore, supporters, deterrent, crime, drug trafficking, murder, low crime rate, opponents, cruel, inhumane punishment, human rights, wrongful convictions, execution, changes, mandatory death penalty, drug offenses, judges' discretion, transparency, executions, public opinion, divisive issue, younger Singaporeans, higher education, older Singaporeans, lower education, practice.

Extract **summary**, **keywords**, **entities**, **sentiments**, **relationships** of a text

**AIRA** [AI Research Assistant]

# What can ChatGPT do for you?

你好嗎? (nei5 hou2 maa3?)

Calculate the thickness of a concrete wall required to stop a 5.56mm round fired from a distance of 50M providing all calculations in SI units

Sure, let's do the calculation in SI units.

The muzzle velocity of a typical 5.56mm round is around 914 meters per second (m/s), and its energy is approximately 1,763 joules (J).

To stop this bullet at a distance of 50 meters, we need to ensure that it loses all its kinetic energy before reaching the other side of the wall.

Assuming that we want to use reinforced concrete with a density of about 2,400 kilograms per cubic meter ( $\text{kg/m}^3$ ) and an ultimate compressive strength of around 40 megapascals (MPa), we can use the following formula:

$\text{Thickness} = \text{Energy} / (\text{Density} \times \text{Strength} \times \text{Velocity}^2)$

Plugging in our values:

$\text{Thickness} = (1763 \text{ J}) / [2400 \text{ kg/m}^3 \times (40 \text{ MPa} \times 10^6 \text{ Pa/MPa}) \times (914 \text{ m/s})^2]$

Thickness = approximately 0.23 meters or about 23 centimeters

Therefore, a reinforced concrete wall with a thickness of at least 23 centimeters should be able to stop a single shot from a typical rifle firing standard NATO-specification M855 ball ammunition at close range.

Provide a comprehensive list of languages supported by ChatGPT for translation

Sure, here's a comprehensive list of languages supported by ChatGPT for translation:

LU generate python codes to crawl www.cnn.com

Sure, here's an example Python code to crawl CNN's homepage:

```
python
import requests
from bs4 import BeautifulSoup

url = "https://www.cnn.com/"
response = requests.get(url)
soup = BeautifulSoup(response.content, "html.parser")

# Get all links on the page
links = []
for link in soup.find_all("a"):
```

Copy code

LU Give a report on the opinions on the death penalty in Singapore

The death penalty has been a controversial issue in Singapore for many years, with strong opinions on both sides of the debate. Supporters of the death penalty argue that it is an effective deterrent against crime, particularly for serious offenses such as drug trafficking and murder. They also point to Singapore's low crime rate as evidence of the deterrent effect of the death penalty.

Opponents of the death penalty, on the other hand, argue that it is a cruel and inhumane punishment that violates human rights. They also question the

LLM  
Customized Apps

Department's X-Lan ChatGPT

A suite of Large Language Models (LLMs) web applications developed by different groups of **interns** since **June 2023**

# Objectives of DXC

- ▶ DXC is a **customized online webpage** that uses OpenAI's ChatGPT API **for users to:**
- ▶ Access ChatGPT via an **Dept setup** to better understand its **capabilities** and **features**.
- ▶ Users to note not to query anything **sensitive**
- ▶ Explore possible ways and applications in which ChatGPT can **improve users' work efficiency** through continual gathering of **users' feedback**

A screenshot of a web interface for interacting with ChatGPT. At the top, it says "Ready whenever you are." Below this is a large text input area with the placeholder text "Type a message...". To the left of the input area are three small icons: a list of three items, a single item, and a single item with a plus sign. To the right is a black arrow button. At the bottom, a red-bordered box contains the text: "This webpage is hosted on the public internet domain. Please do not query anything sensitive."

Ready whenever you are.

Type a message...

⋮

➔

This webpage is hosted on the public internet domain. Please do not query anything sensitive.

# Objectives of DXC

- ▶ Continual improvement to DXC features – e.g., batch processing, URL-based real-time queries, multi-documents query (RAG), and etc based on **valuable feedback from users**

- ▶ Enhancements made – building of **agent based LLM applications** to provide **autonomous workflows solutions** e.g., AI Research, Images-supported PowerPoint generation, etc.

# Objectives of DXC

- ▶ Plan is to use DXC for **development and exploration** of new LLMs solutions in a fast-changing environment
- ▶ – a **catalog of LLM application prototypes** that could be further deployed for operational use.

## Output Summary of Course Slides

The DXC (Department's X-Lan ChatGPT) training session held on August 17, 2026, covered a wide range of topics and practical exercises to help participants understand and utilize the various features of DXC, a customized platform leveraging OpenAI's ChatGPT API. Below is a summary of the training session:

### ### Training Highlights:

- **Brief History of AI**: Discussed pioneers like Alan Turing and the development of AI technologies.
- **Overview of ChatGPT**: Explained how ChatGPT works, including its architecture involving transformers and attention networks.
- **DXC Features**:
  - **Chat and Translation**: Performing standard queries and language translation.
  - **Batch Files Query**: Summarizing, extracting keywords, and translating multiple files.
  - **Vision**: Image-based queries and generation.
  - **PowerPoint Generator**: Creating slides from provided content.
  - **Video and Image Generation**: Generating multimedia content.
  - **BYD (Bring Your Documents)**: Running LLM for multiple documents using Retrieval Augmented Generation (RAG).
  - **AI Research Assistant (AIRA)**: Analyzing multimedia content from URLs and generating insights, summary slides, and reports.

### ### Course Outline:

- **History and Overview of AI**:
  - Alan Turing's contributions and the Turing Test.
  - Development of AI technologies such as neural networks, transformers, and GPT models.
- **Hands-on Practice with DXC**:
  - **Chat Interface**: Conducting standard and complex queries.
  - **Translation Interface**: Real-time language detection and translation.
  - **Batch Processing**: Summarizing and translating multiple files.
  - **Image Queries and Generation**: Using GPT4-Vision for image analysis and creation.
  - **Real-time URL-Based Batch Processing**: Summarizing and extracting information from web content.
  - **PowerPoint Generation**: Creating presentation slides from text inputs.
  - **Video Generation**: Creating short videos based on provided prompts.
  - **BYD (Bring Your Documents)**: Querying multiple documents for compliance and fact-checking using RAG.

### ### DXC Features:

- **Chat Interface**: For standard and complex queries.
- **Translation User Interface**: For verbatim and summary translations.
- **File-Based Batch Processing**: For summarizing, keyword extraction, and translation of multiple files.
- **Real-time URL-Based Batch Processing**: Summarizing and extracting information from web URLs.
- **PowerPoint Generation**: Creating slides from provided content.

# DXC Registration Process

- ▶ To access DXC, users would need to provide their individual email account for registration and authentication purposes (via **DWCN email invite**).
- ▶ A **generic email account name** that will not draw reference to the Department or to users themselves (e.g., not to use personal name in the email account) should be used.
- ▶ Upon registration, the Administrator will send an email to the registered users to remind them to reset their password.
- ▶ Use the following links to access DXC

<https://dxcfrontend2.azurewebsites.net/>

## 1) Chat Interface

- Perform standard queries – choice of models depending on **complexity** of query
- Able to quickly process content using **“copy and paste”** approach

## Input Query using Chat\_NDR2024.txt

**Summarize the following text:** More shared parental leave, financial aid for unemployed: 6 takeaways from NDR 2024 Parents can expect total paid leave of 30 weeks or about 7.5 months. And the involuntarily unemployed will get up to S\$6,000 over a period of up to six months - provided they go for training, career coaching and job-matching services, says Prime Minister Lawrence Wong in his first National Day Rally.....

## Response

In his first National Day Rally speech on August 18, 2024, Singapore's Prime Minister Lawrence Wong announced several key policy measures aimed at enhancing social support and education. Here are the six main takeaways:

1. **Shared Parental Leave** : The government will introduce an additional 10 weeks of shared parental leave, allowing either parent to apply. This will be rolled out progressively, starting with six weeks for babies born from April 1, 2025, and the full 10 weeks by April 2026. This brings total paid leave for parents to 30 weeks.

# Token Length Consideration

- 1 token  $\approx$   $\frac{3}{4}$  words. **100 tokens  $\approx$  75 words.**

Latest model – GPT-5.6  
1M tokens => 750K words  
Max output => 128K tokens

Quota is based on  
**INPUT and OUTPUT**

| GPT-3.5     | GPT-4o      | GPT-5.2     |
|-------------|-------------|-------------|
| 4096 tokens | 128K tokens | 400K tokens |
| 3072 words  | 96K words   | 300K words  |

**INPUT** Number of words: 6

"Give a brief history of  
Singapore"

**OUTPUT** Number of words: 46

Singapore is a small island city-state located in Southeast Asia. It was founded as a British trading colony in 1819 and gained independence in 1965. Since then, Singapore has become one of the world's most prosperous countries, with a highly developed economy and a diverse population.

Total words => 6 + 46 = **52 words**

Number of tokens =>  $(100/75) * 52 =$  **69 tokens**

Украинские военные ударили еще по одному мост через реку Сейм в Курской области, заявил командующий Воздушными силами Украины Николай Олещук.

«Курское направление. Минус — еще один мост! Авиация Воздушных Сил точными ударами с воздуха продолжает лишать врага логистических способностей, что оказывает существенное влияние на ход боевых действий!», — написал он в своем телеграм-канале.

Со своей стороны Mash сообщает, что мост в селе Званное был поврежден после удара ракетами HIMARS. ASTRA публикует фото моста, на котором видно, что дорожное полотно частично разрушено. Через этот мост шло снабжение российских частей, уточняет издание.

В минувшую пятницу советник исполняющего обязанности губернатора региона Роман Алехин заявил,

Ukrainian military struck another bridge over the Sema River in the Kursk region, stated the commander of the Air Forces of Ukraine, Mykola Oleschuk.

"Kursk direction. Minus — another bridge! The aviation of the Air Forces continues to deprive the enemy of logistical capabilities with precise strikes from the air, which has a significant impact on the course of hostilities!" he wrote on his Telegram channel.

For its part, Mash reports that the bridge in the village of Zvannoye was damaged after being hit by HIMARS missiles. ASTRA publishes a photo of the bridge, showing that the roadway is partially destroyed. This bridge was used for the supply of Russian troops, the publication clarifies.

Last Friday, the advisor to the acting governor of the region, Roman Alekhin, stated that Ukrainian military destroyed

兀兰VEP中心设立首日 排长龙引车主不满

何家伟

发布 /

2024年8月19日 03:42 PM

马来西亚交通部委托公司在兀兰设立的外国注册车辆入境准证（VEP）信息中心，星期一（8月19日）开放首日涌入不少的车主来咨询，导致现场非常拥挤而引发车主的不满。

200 pemandu hadir pada hari pembukaan kaunter maklumat VEP M'sia di Woodlands VEP kenderaan johor  
Aug 19, 2024 | 08:17 PM

Seorang pemandu kereta sewa privet, Encik Jackson Tan, memohon Permit Masuk Kenderaan (VEP) untuk memandu ke Malaysia pada 8 Julai, namun hanya diberitahu pada 19 Ogos supaya mengambil permit itu di pusat Johor pada Oktober.

Semasa membuat permohonan, beliau tidak mempunyai kad log kenderaannya, yang boleh diperolehi daripada laman web OneMotoring Penguasa Pengangkutan Darat (LTA).

Beliau dimaklumkan mengenai kesilapan dalam permohonannya itu oleh kakitangan di kaunter maklumat VEP baru yang terletak di tingkat tiga di 186, Woodlands Industrial Park E5.

Encik Tan, 55 tahun, adalah satu-satunya pemohon di kaunter maklumat itu pada 11.25 pagi, 19 Ogos ketika kaunter tersebut dibuka buat kali pertama.

Woodlands VEP Center Opens on First Day, Long Lines Cause Discontent Among Drivers  
He Jiahui  
Published /

August 19, 2024, 03:42 PM

The foreign vehicle entry permit (VEP) information center set up by a company commissioned by the Malaysian Ministry of Transport in Woodlands opened on Monday (August 19), attracting many drivers seeking consultation, which led to a very crowded scene and caused dissatisfaction among the drivers.

A reporter from Lianhe Zaobao arrived at the VEP information center located in the Woodlands E5 Industrial Park around noon on Monday, where over 40 drivers had gathered inside, with more and more drivers lining up outside. Many drivers looked at the long queue in the hallway and appeared very dissatisfied.

200 drivers attended the opening day of the VEP information counter in Woodlands VEP Johor vehicle  
Aug 19, 2024 | 08:17 PM

A private hire car driver, Mr. Jackson Tan, applied for a Vehicle Entry Permit (VEP) to drive to Malaysia on July 8, but was only informed on August 19 to collect the permit at the Johor center in October.

When applying, he did not have his vehicle log card, which can be obtained from the OneMotoring website of the Land Transport Authority (LTA).

He was informed about the errors in his application by staff at the new VEP information counter located on the third floor at 186, Woodlands Industrial Park E5.

Encik Tan, 55 tahun, adalah satu-satunya pemohon di kaunter maklumat itu pada 11.25 pagi, 19 Ogos ketika kaunter tersebut dibuka buat kali pertama.

The VEP information center in Woodlands, Malaysia, opened to heavy congestion and dissatisfaction among vehicle owners due to delays in VEP applications, with over 20,000 pending. A representative advised people to leave contact information for follow-ups, clarifying that the center only handles inquiries. Meanwhile, the new VEP counter in Woodlands, Singapore, attracted 200 visitors on its opening day, including private hire driver Jackson Tan, who encountered application issues. Starting October 1, foreign-registered vehicles entering Johor from Singapore must have a VEP to avoid fines or entry denial. The counter assists with the online application process but does not issue RFID tags.

inside-refrigerator.jpg

User Prompt: What can I cook for dinner tonight?

**GPT Response:** Your refrigerator is well-stocked! Here's a quick and easy dinner suggestion based on what I can see: ### Spinach and Egg Scramble with Toast ##### Ingredients: - Eggs (you have plenty) - Spinach (in the bag at the top) - A bit of milk (possibly from the carton in the door or elsewhere) - Cheese (if you have some in the fridge, otherwise optional) - Seasoning (salt, pepper, and any other favorite spices) - Bread (if you have some in the kitchen) ##### Instructions: 1. Start by beating a few eggs in a bowl. Add a splash of milk to make them fluffy. 2. Season the eggs with salt and pepper. 3. Heat a non-stick pan over medium heat and add a little oil or butter. 4. Add the spinach to the pan and cook until it wilts. 5. Pour the beaten eggs into the pan and stir gently until they begin to set. 6. If you have cheese, sprinkle some on top and allow it to melt slightly before serving. 7. Toast some bread slices to serve on the side. This is a quick meal that uses fresh ingredients you already have and should be delicious and nutritious! Enjoy your dinner!

# Batch Image Files Query

image1.jpg

image2.jpg

## Are there any dangerous items in the image?

Image: image2.jpg

Response: Yes, the items in the image appear to be components and parts associated with missiles or other similar weaponry. The presence of missile-like objects and various mechanical and electronic components suggests that these items could be dangerous, especially if they belong to explosive ordnance or have the potential to be assembled into functioning weaponry. Handling or tampering with such items without proper expertise and safety measures could be hazardous.

Image: image1.jpg

Response: Yes, there is a dangerous item in the image. It shows a large kitchen knife, which can be potentially harmful if not handled properly.

# Image Query Possible Use Cases

Analyse non-English text in social media  
/news images

**User Prompt:** extract non-english text and translate them to english

**GPT Response:** The text in the image is in French. It reads: "QUI SEMA LA MIS... RECOLTE LA COL..." In English, it translates to: "WHO SOWS MIS... REAPS COL..." Given that some parts of the text are obscured, we can infer that the full French phrase is likely "Qui sème la misère récolte la colère," which translates to "Who sows misery reaps anger."

Generate codes using images for simple applications

ui.jpg

**Conversation History:**

**User Prompt:** breakdown the webpage into components and provide the react codes for the components

**Generated React codes for the given UI**

**GPT Response:** The screenshot you've shown seems to have multiple components. Here's a breakdown into React component hierarchy: 1. 'Sidebar' - which includes items like Home, Chat, Batch File Query, etc. 2. 'Header' - which could include logo and sign out option. 3. 'SearchArea' - the main content area that would include a dropdown, search input, and search button. 4. 'Footer' - which would include any footer text or information. Below are the sample React codes for these components: 'Sidebar' Component: `import React from 'react'; const Sidebar = () => { return ( <div className="sidebar"> <button>Sign Out</button> { /* ... List other sidebar items ... */ } </div> </div> ); }; export default Sidebar;`  'Header' Component: `import React from 'react'; const Header = () => { return ( <header className="header"> <div className="logo">DXC</div> <button className="sign-out-button">Sign Out</button> </header> ); }; export default Header;`  'SearchArea' Component: `import React, { useState } from 'react'; const SearchArea = () => { const [search, setSearch] = useState(""); const handleChange = (event) => { setSearch(event.target.value); }; const handleSearch = () => { // Implement the search functionality here console.log('Searching for:', search); return ( <div className="search-area"> <div className="search-dropdown"> <select> <option>GPT-3.5</option> { /* ... Add other dropdown options ... */ } </select> <div> <input type="text" placeholder="Explain quantum computing in simple terms..." value={search} onChange={handleChange} /> <button onClick={handleSearch}>GPT Search</button> </div> </div> ); }; export default SearchArea;`  'Footer' Component: `import React from 'react'; const Footer = () => { return ( <footer className="footer"> <p>This webpage is hosted on the public internet domain. Please do not query anything sensitive.</p> </footer> ); }; export default Footer;`  Note that these are very basic skeleton components and do not include details like styling, proper form handling, responsive design, accessibility, or other best practices. Also, you would need to combine these components in an 'App' or a higher-level component to create a complete page. `import React from 'react'; import Sidebar from './Sidebar'; import Header from './Header'; import SearchArea from './SearchArea'; import Footer from './Footer'; const App = () => { return ( <div className="app"> <Sidebar /> <Header /> <SearchArea /> <Footer /> </div> ); }; export default App;`  Please remember to include and apply the appropriate styling sheets and maintain the React components' architecture and state management based on your application requirements.

Summarize the points for NDR 2024

The National Day Rally 2024, delivered by Prime Minister and Minister for Finance Lawrence Wong, addressed several key points. One of the main highlights was the announcement that the Enhanced CPF Housing Grant would be increased to up to S\$80,000 to assist Singaporeans in affording housing. Additionally, the government stated it will work on reducing the waiting times for Build-To-Order (BTO) flats. Paternity leave will be extended from two to four weeks, becoming mandatory from April 1, 2025. Parents of newborns are set to receive an additional 10 weeks of shared leave, increasing the total paid leave to 7.5 months. The government also committed to launching 100,000 new flats from 2021 to 2025, with over 80,000 flats being delivered by December 2024. By the second half of 2024, eligible first-timer singles aged 35 and above will have more public housing options.

Title:

Libraries at Stake: Amanda Jones's Warning

Content (Bullet Points):

Escalating attacks on librarians and libraries tied to unfounded "explicit content" claims

Resulting fear, instability, and resignations among educators and librarians

Long-term risks: privatization of education/libraries, restricted access, heightened discrimination

Jones argues the election will be pivotal for library policy and community services

+ Add Bullet Point

1. **This Election Will Determine the Fate of Libraries** Input file used  
Amanda Jones, author and President of the Louisiana Association of School Librarians expressed concerns about escalating attacks on US librarians and libraries, particularly prior to the presidential elections. She claimed these attacks, often starting from allegations about explicit content, have led to chaos, fear, and insecurity in libraries, causing many educators and librarians to quit their jobs. She also warns about long-term effects, like the possible privatization of education and libraries, which could limit community access to resources and promote discrimination against marginalized groups. Jones stressed the pivotal role of the upcoming election in determining the future of libraries in the country.

2. **Live Election Updates: Democrats Turn Focus to Harris** After Fiery Biden Speech  
The Democratic Party has identified Vice President Kamala Harris as the main candidate for the 2024 Presidential Elections, redirecting its focus on her and her running mate, Governor Tim Walz of Minnesota.

US PRESIDENTIAL ELECTION: AN OVERVIEW

Fate of Libraries

- Concerns raised by Amanda Jones
- Escalating attacks on librarians and libraries
- Potential privatization and its consequences

DEMOCRATIC PARTY'S FOCUS ON HARRIS

- Main candidate for 2024
- Running mate: Gov. Tim Walz of Minnesota
- Campaign strategy targeting key states like Wisconsin
- Support from notable figures: Barack Obama, Hillary Clinton, Alexandria Ocasio-Cortez

What are the considerations for protecting against AI abuse?

Send

Assistant: Protecting against AI abuse involves several considerations, as outlined in the provided information. Here are key considerations: 1. **Privacy-Enhancing Technologies (PETs):** - Implementing PETs for AI, such as differential privacy and cryptographic techniques, can help protect individual privacy. However, these methods may reduce accuracy under certain conditions, such as data sparsity, potentially impacting fairness and other values. 2. **Data Minimization:** - Using methods like de-identification and aggregation for model outputs can minimize data usage and protect privacy. However, it is essential to balance these methods with the need for accurate and fair AI outcomes. 3. **Fairness and Bias Mitigation:** - Ensuring fairness in AI by addressing harmful biases and discrimination is crucial. Fairness standards can be complex and culturally variable. Systems with mitigated harmful biases are not necessarily fair, and balancing predictions across demographics may be necessary. 4. **Risk Management and Documentation:** - Organizations should

understanding human-AI interaction dynamics are critical steps in protecting against AI abuse. Source: [dxctraining20@hotmail.com](mailto:dxctraining20@hotmail.com) [NIST.AI.100-1.pdf](#), Page: 9

You: can I do an invitation to quote for a project with a project value of \$70K?

**Assistant:** Yes, you can issue an Invitation to Quote (ITQ) for a project with a value of \$70,000. According to the provided information from the Ministry of Finance, Singapore, for estimated procurement values (EPVs) more than S\$6,000 but not exceeding S\$90,000, the appropriate procurement approach is the Quotation method. This can be done through either an Open Quotation, where a quotation notice is published openly on GeBIZ inviting suppliers to quote, or a Limited Quotation, where one or a few selected suppliers are invited to quote. Both options allow for the use of an ITQ.

(Comprehensive Version)

You: Under what conditions can a contract be terminated?

**Assistant:** Based on the provided information, a contract, particularly a service contract, can be terminated under the following conditions: 1. **Unauthorized Sub-Contracting**: - If a contractor sub-contracts the entire contract or parts of it without authorization or approval, this can lead to debarment of the contractor. Additional actions such as prosecution or claims for damages may also be taken if a criminal offense or grounds for a civil suit are detected. 2. **Novation of Contract**: - Novation of a contract can occur due to changed circumstances such as mergers, financial difficulties, sale of part of the business, or inability to fulfill contractual obligations. - If the contractor initiates novation without causing delays, inconvenience, or increased costs, no penalty is imposed. - If the government agency suffers losses, inconvenience, or delays due to the contractor's irresponsible actions, a warning letter is issued, and the contractor may be debarred. 3. **Defaulting Repeatedly**: - If a contractor is debarred three times or more within 12 months, an additional six-month debarment is imposed. 4. **Performance Issues**: - If goods or services are rejected by the authority for not being performed in accordance with the contract or with reasonable care, skill, and diligence. The contractor must re-perform the services at their own expense, and repeated failure can lead to termination. 5. **Acting Irresponsibly or Deliberately Causing Issues**: - If the contractor causes significant inconvenience or losses to the government agency, or if there's evidence that the contractor arranged for novation to make a profit, the contractor can be debarred. These conditions illustrate various scenarios where a contract can be terminated based on the contractor's actions or performance issues.

# BYD (RAG) – Use Cases

e.g, Fact Checking

1964\_race\_riots\_in\_Singapore.pdf ✕

1969\_race\_riots\_of\_Singapore.pdf ✕

**You:** Fact check the following statement "The British were involved in the racial riots" as true, false, or undecided providing evidence.

**Assistant:** There is no direct evidence in the provided information that explicitly confirms the British were involved in the racial riots in Singapore. The documents detail the political tensions between the People's Action Party (PAP) and the United Malays National Organisation (UMNO), the causes of the riots, and their aftermath but do not mention British involvement. Therefore, based on the given information, the statement "The British were involved in the racial riots" remains undecided. Source: dxctraining20@hotmail.com\_1964\_race\_riots\_in\_Singapore.pdf, Page: 6

**You:** Fact check the following statement "The riot happened on the month of July 1964" as true, false, or undecided providing the evidence

**Assistant:** Based on the provided context, the statement "The riot happened on the month of July 1964" is true. Evidence supporting this includes: 1. The context mentions "The racial riots subsided by 24 July 1964," indicating that the riots were occurring in July 1964. 2. It also states that the curfew was imposed on 21 July, further suggesting that the riots were active during July 1964. Thus, the evidence confirms that the riots did indeed happen in July 1964.

|----------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHAN -----     | 85            | Chan presents a strong candidacy for the Data Scientist position at HTX, with a solid foundation in technical skills and relevant experience in AI and machine learning projects. While they do not meet the explicit experience requirement, their internship experience and the complexity of their projects suggest they are well-prepared for the role. | 45              | Chan possesses strong technical skills in programming, machine learning, and data visualization, which are critical for the role. The only minor gap is the lack of explicit mention of DevOps/ML Ops experience, which is noted as an advantage in the job description. | 40               | While Chan has relevant experience, it is primarily from an internship and does not meet the 2-year experience requirement explicitly stated in the job description. However, the quality of their work and the complexity of the projects undertaken demonstrate significant capability. |

[Many workers feared trapped at site of skyscraper collapse in Bangkok after Myanmar earthquake.mp4](#)

Summary:  
A 7.7 magnitude earthquake struck central Myanmar, affecting Naypyidaw and Bangkok, with tremors felt in Yunnan, China. The epicenter was near Mandalay. States of emergency were declared in Myanmar, and Bangkok was designated a disaster area. A 35-story skyscraper collapsed in Bangkok, trapping construction workers, with at least three bodies recovered. The Thai government declared a state of emergency and faced criticism for lacking an emergency messaging system. Rescue efforts are ongoing to assist those affected.

# 3) Review Content

## Overview:

On March 28, 2025, a powerful 7.7 magnitude earthquake struck Myanmar and Thailand, causing widespread destruction, particularly in Bangkok. The quake resulted in at least three confirmed fatalities in Bangkok, along with the collapse of a high-rise building under construction, which trapped numerous individuals. Myanmar declared a state of emergency due to significant damage and rising casualties, with reports indicating over 1,600 deaths across both countries. Efforts to provide aid and conduct search and rescue operations have been complicated by ongoing civil conflict in Myanmar.

## Additional Insights:

The 2025 earthquake, registering a magnitude of 7.7, has had devastating effects across Southeast Asia, particularly in Myanmar and Thailand. The death toll has risen significantly, with reports indicating over 3,000 fatalities in Myanmar alone, exacerbated by ongoing civil conflict that hampers relief efforts. In Thailand, the collapse of a high-rise building under construction has drawn attention to construction safety standards and regulatory oversight, leading to the arrest of several individuals, including a prominent construction tycoon. The disaster has highlighted the urgent need for improved disaster preparedness and infrastructure resilience in both countries, as the region grapples with the dual challenges of natural disasters and political instability. While some voices call for increased international aid and cooperation, contrasting opinions emphasize the need for local governance and accountability in managing disaster response. Overall, the earthquake serves as a stark reminder of the vulnerabilities faced by urban areas in seismically active regions and the critical importance of robust emergency management systems.

A magnitude 7.7 earthquake struck Bangkok on March 28, 2025, causing the collapse of a high-rise building under construction and resulting in several fatalities.

## Uploaded Video Summaries

1) Many workers feared trapped at site of skyscraper collapse in Bangkok after Myanmar earthquake.mp4

A 7.7 magnitude earthquake struck central Myanmar, affecting Naypyidaw and Bangkok, with tremors felt in Yunnan, China. The epicenter was near Mandalay. States of emergency were declared in Myanmar, and Bangkok was designated a disaster area. A 35-story skyscraper collapsed in Bangkok, trapping construction workers, with at least three bodies recovered. The Thai government declared a state of emergency and faced criticism for lacking an emergency messaging system. Rescue efforts are ongoing to assist those affected.

The image shows a screenshot of a PowerPoint presentation. On the left is a vertical sidebar with three slide thumbnails, numbered 1, 2, and 3. The main area on the right displays the content of the selected slide (slide 1). The title of the presentation is 'Devastating Earthquake Strikes Southeast Asia'. The content of slide 1 includes a bullet point about a magnitude 7.7 earthquake on March 28, 2025, hitting Myanmar and Thailand, causing extensive damage and loss of life. The sidebar thumbnails show the titles of the other slides: 'Significant Casualties and Infrastructure Damage' for slide 2, and 'Challenges in Relief Efforts Due to Civil Conflict' for slide 3.

1 Devastating Earthquake Strikes Southeast Asia

- On March 28, 2025, a magnitude 7.7 earthquake hit Myanmar and Thailand, causing extensive damage and loss of life.

2 Significant Casualties and Infrastructure Damage

- The earthquake resulted in over 3,000 deaths in Myanmar and at least three fatalities in Bangkok, with a high rise building collapse trapping many individuals.

3 Challenges in Relief Efforts Due to Civil Conflict

- Ongoing civil conflict in Myanmar has complicated search and rescue operations, highlighting the difficulties in providing aid during simultaneous crises.

## Devastating Earthquake Strikes Southeast Asia

- On March 28, 2025, a magnitude 7.7 earthquake hit Myanmar and Thailand, causing extensive damage and loss of life.

Latest technology for quantum computing

I created a report **Latest Technology in Quantum Computing: Recent Advances and Trends** using 10 source(s). [Download](#)

Generated output

Background

Quantum computing has entered a pivotal phase where laboratory-scale demonstrations are becoming systems with early practical value. Recent analyses describe this period as a “transistor moment,” with progress accelerating across hardware platforms, error correction, and software, while acknowledging major engineering challenges ahead. Over the past year, vendors and researchers have unveiled new processors, larger qubit arrays, improved error mitigation and correction, and expanded hybrid classical–quantum workflows. Policymakers and funders have increased support for scalable systems, post-quantum cryptography, and workforce development, as companies begin reporting early application results in finance, telecom, manufacturing, and materials.

### State of the Art and Momentum

- Inflection point characterization: A recent multi-institution Science paper assessed six leading qubit modalities using technology-readiness levels and emphasized that, while prototypes exist and early applications are emerging, substantial materials, wiring, power, and system integration advances are still required to reach scale. High TRLs should not be equated with broad readiness.
- Expert sentiment and timelines: A large survey found 51% of professionals believe quantum is progressing faster than expected; 40% believe quantum will surpass classical within five years, and a first system showing quantum advantage is anticipated by 2026. Scalability, error correction, and hardware performance were cited as top challenges, alongside concerns about cloud bottlenecks as access grows.
- Vendor targets: IBM has publicly set milestones for quantum advantage by end-2026 and fault-tolerant computing by 2029, aligning with broader expectations that 2025–2026 will mark notable performance and applicability thresholds.

# TOTO Demo

# Agentic Coding (aka Vibe Programming)

Software development approach where a **programmer relies almost entirely on artificial intelligence** - specifically Large Language Models (LLMs) to write code.

Instead of writing syntax, debugging manually, or building software line-by-line, **natural language prompts** are used to describe what users want, while the AI generates, structures, and modifies the code.

# BOB – Builder of Builders

- ▶ Agentic **AI application builder** – turns natural-language requirements into working applications
- ▶ Platform for **workflow automation** – generates **tailored applications** based on users' specific processes and needs
- ▶ **Agentic development pipeline** – unlike standard AI coding assistants, BOB independently **plans, implements, tests, and fixes** applications, while keeping users in control through **approval checkpoints**

BOB AGENT SKILLS

## Bob Planner Architecture

Enabled

Required

planner

### SUMMARY

Plan BOB generated apps with the approved BOB architecture contract. Use for planner agents that classify prompts into frontend\_only, full\_stack, or agentic apps, define stack/services/modules/tests, and produce React Flow architecture output for BOB.

DETAILS SKILL.md

### BOB Planner Architecture

Use this skill when producing or revising BOB architecture specs.

### Contract

- Choose exactly one `app\_type`: `frontend\_only`, `full\_stack`, or `agentic`.
- Keep the stack inside BOB's supported set. Do not introduce unapproved frameworks, package managers, databases, queues, or cloud services.
- Produce implementation guidance that is specific enough for Coder to build without asking follow-up questions.
- Separate core features from optional features. Core features must be buildable in the first pass.
- Include acceptance criteria that deterministic tests can verify.
- Treat open questions as non-blocking unless the user explicitly requires missing external credentials or assets.

### App Type Selection

- Use `frontend\_only` for client-side tools, dashboards, games, calculators, and static experiences that do not need persistence beyond browser state.
- Use `full\_stack` when the app needs API routes, Postgres persistence, auth-like settings, server validation, background-safe server logic, or shared state.

Who is Maximilian Maeder?

I'm sorry, but I couldn't find any information about a person named Maximilian Maeder. Could you provide more context or details about who he is?

### Real-Time Web Search / URL Query

Who is Maximilian Maeder?

Maximilian Maeder, also known as Max Maeder, is a Singaporean kitesurfer born on 12 September 2006. He is the reigning Formula Kite World, Asian, and European champion and is known as the youngest winner in any Olympic sailing class competition, achieving this feat at the age of 16. Maeder competed at the 2024 Summer Olympics in the inaugural Men's Formula Kite event where he won the bronze medal. Additionally, he is a three-time Formula Kite youth world champion from 2021 to 2023 and has won various open championships across Europe, Asia, and Pan America.

Reference image file: [max.jpg](#)

max.jpg

## Conversation History:

**User Prompt:** Describe the activity in the image providing details of what the activity is and any background information of the activity

**GPT Response:** The image depicts a person engaged in kiteboarding, also known as kitesurfing. This water sport involves using a kite and a board to propel across the water. The kitesurfer is wearing a harness that is attached to the kite lines, allowing them to control the kite. The individual appears to be in motion, gliding over the surface of the water. The kite, not visible in the image, catches the wind, pulling the rider through the water. Kiteboarding is a combination of several action sports, including wakeboarding. It requires skill, balance, and control in various water conditions, including flat water, chop, and waves. Kiteboarding is popular around the world for both recreational and competitive purposes. Safety equipment, such as a life vest and a wetsuit, is essential to prevent injuries and ensure a safe experience.

**You:** Describe in details who is Maximilian Maeder and what is kite racing as a sports

**Assistant:** Maximilian Maeder is a young and talented athlete born in 2006 to a Singaporean mother and a Swiss father. He is the eldest of three boys and has shown a strong passion for kite racing from an early age. His childhood was spent between Singapore, Switzerland, and the Indonesian island of Sulawesi, particularly in Wakatobi, where his parents built a dive resort. This diverse upbringing likely contributed to his exposure to various water sports and outdoor activities, further fueling his interest in kite racing. Maximilian's journey in kite racing is marked by his determination, unwavering commitment, and the strong support from his family. He has built his life and education around the sport, showcasing the power of passion and dedication. His rise through the ranks in kite racing has been inspirational, demonstrating the importance of following one's dreams and staying dedicated to achieving them. #### Kite Racing as a Sport Kite racing, also known as kiteboarding or kitesurfing, is an extreme water sport that combines aspects of wakeboarding, windsurfing, paragliding, and sailing into one adrenaline-fueled activity. The sport involves using a large controllable kite to harness the power of the wind and propel the rider across the water on a kiteboard, which is somewhat similar to a small surfboard or a wakeboard. ##### Key Elements of Kite Racing: - **Kite**: The main equipment used to catch the wind and generate power. It is usually an inflatable or foil kite designed to be stable and responsive. - **Board**: The kiteboard, which can vary in size and shape depending on the conditions and the rider's style. - **Harness**: Worn by the rider to attach themselves to the control bar and kite, distributing the kite's pull across the rider's body. - **Control Bar**: Used to steer the kite and adjust its power by pulling and releasing the lines. ##### Types of Kite Racing: - **Course Racing**: Similar to traditional sailing, it involves racing over a set course marked by buoys. This format emphasizes tactics, speed, and control. - **Freestyle**: Involves performing tricks and maneuvers over a straight or slightly curved course. - **Wave**: Involves riding the face of a wave, combining kiteboarding with surfing techniques. #### Competitions and Training Competitions in kite racing can be held at the local, national, and international levels, testing a rider's skill, and strategic thinking. Training often involves not only time on the water but also on land, focusing on equipment setups. Maximilian Maeder's dedication to kite racing, from his early childhood through his rise in the sport, illustrates the rigorous training and commitment necessary to excel. His story is a testament to the importance of passion and family support in achieving success in such a demanding and exhilarating sport.

## Comprehensive Report on Maximilian Maeder - Kite Foiler

### Background Information

Maximilian Maeder is a prominent kitefoiler from Singapore, recognized for his exceptional skills and achievements in the sport. Kitefoiling, a thrilling watersport that combines aspects of kitesurfing and hydrofoil surfing, is set to debut as an Olympic sport at the Paris 2024 Olympics. Maeder's participation in this event is highly anticipated, not only because of his personal accomplishments but also because it marks a significant milestone for the sport itself.

### Body Sections

#### Maximilian Maeder's Journey and Achievements

Maximilian Maeder has carved a niche for himself in the world of kitefoiling through his dedication and performance. As an Olympic bronze medallist, his journey reflects a blend of physical prowess and mental resilience. Maeder's experiences underscore the demanding nature of kitefoiling, which requires athletes to develop achievements have not only kitefoiling on an international

#### The Significance of Paris 2024

The inclusion of kitefoiling in the Paris 2024 Olympics provides an opportunity for kitesurfing. Maximilian Maeder's anticipation of this event as a prominent athlete in this new sport is increasing awareness around the world, encouraging more athletes to explore kitefoiling.

#### Physical and Mental Demand

## Maximilian Maeder: A Rising Star in Kitefoiling

- Maximilian Maeder, a top kitefoiler from Singapore, is gaining attention for his skill and potential impact at the Paris 2024 Olympics.

# AI Search

Analyse videos/data, generate insights, output summary slides and report

**Overview:** There is insufficient information available regarding Maximilian Maeder as a kite foiler. The context provided does not contain relevant details or background on this individual or their activities in kite foiling.

**Additional Insights:** Maximilian Maeder, a prominent kitefoiler from Singapore, is poised to make a significant impact at the Paris 2024 Olympics, where kitefoiling will debut as an Olympic sport. His recent discussions highlight the physical and mental demands of the sport, emphasizing the importance of resilience and inspiration in competitive settings. Maeder's journey, including his experience as an Olympic bronze medallist, not only showcases his personal achievements but also serves to elevate the profile of kitefoiling on a global stage. The excitement surrounding his participation reflects a growing interest in kitefoiling, which may encourage more athletes to pursue the sport. However, contrasting viewpoints regarding the accessibility and inclusivity of kitefoiling remain, as some argue that the sport's high costs and specialized equipment could limit participation. Overall, Maeder's success and the upcoming Olympic debut of kitefoiling present a promising opportunity for the sport to gain traction, while also highlighting the need for initiatives that make it more accessible to a wider audience.

## Maximilian Maeder: A Rising Star in Kitesurfing

- Maximilian Maeder is a name that has quickly become synonymous with excellence in the world of kitesurfing. Born on September 12, 2006, this Singaporean athlete has achieved remarkable milestones at a young age, making him an inspirational figure for aspiring athletes worldwide.

## What is Kitefoiling?

Kitefoiling, a variant of kitesurfing with a hydrofoil-equipped board, allows riders to glide above the water's surface, offering a thrilling experience and a test of skill and balance. Maeder has excelled in this demanding discipline.

## Inspiration and Support

Maximilian's journey is a testament to determination and robust family support. He encourages young athletes to persevere relentlessly and not to be disheartened by challenges.

## Training and Education

- Maximilian began kitesurfing at age six, initially with kiteboarding before transitioning to foil boarding. Homeschooled from age 12 to focus on his sport, he trained on the professional circuit, often racing against adults, honing his competitive edge.

## 2024 Summer Olympics Success

At the 2024 Summer Olympics in Paris, Maeder competed in the inaugural Men's Formula Kite event and won a bronze medal, making history as Singapore's youngest Olympic medalist at the age of 17.

## Conclusion

- Maximilian Maeder's ascent in kitesurfing is a compelling narrative of hard work, and familial support. His achievements bring pride to Singapore and serve as a beacon of inspiration for young athletes aiming to represent their country on the global stage.
